

Harness Button

The Harness Button replaces the carabiner that locks the FlyBag Hero Harness. It is a good option if you find the carabiner hard to work with. Additionally, the Harness Button prevents the carabiner hook from getting caught in small mesh nets when you use your harness to hold the net, which, by the way, works great.

To replace the carabiner, untie or cut the harness cord close to the sliding lock on the side that holds the carabiner. Replace the carabiner with the Harness Button and tie the harness cord back to the sliding lock.

Base: Birch wood

Sustainability

Low impact

From day one we aim to keep a low impact on our planet. To do this we put a lot of time in the design process to be able to produce FlyBag in Sweden with as little parts possible.

Hand made by retired fishermen

Due to our design and development process we can make our products locally without even a factory line. We take great pride in the fact that our products now are assembled by retired fishermen in the heart of Sweden.

FlyBag LAB

To support sustainable growth and development, we release FlyBag LAB. All FlyBag LAB products are produced in limited edition batches. When we see that the fly fishing community embraces a product, we elevate it to our FlyBag line up. This approach helps us minimize production waste while fueling our passion for developing quality fly fishing products.
